Continuation of 11. does NOT place the application in condition for allowance because: Applicant contends that there is motivation in combining Yoon et al. with Wurster et al. is not sufficient. In response to applicant that the motivation for combining the reference in order to growth the oxide layer. Applicant further contends that Wurster teaches forming the oxide on the sidewalls of a capacitor trench which is not part of gate stack. In response to appicant that Yoon et al clearly teach forming the oxide film (18) by oxygen thermal oxidation which is a part of the gate stack. however, Yoon does not clearly teach that the gate oxide film is a wetgate oxide. It is known that wet oxide is formed by wet oxygen oxidation or water oxidation which is evidenced by Wurster. Examiner only relies on the Wurster to show the oxide film can formed by either oxygen or water through the thermal oxidation..
